

PAIRING THE WI TRANSMITTER (STORMY9000) & RECEIVERS

PAIRING

Pairing the Stormy 9000 to the Single Channel Receivers

- Place a magnet over the red capacitor on the Receivers motherboard.
- You will see LED lights flash blue and red back and forth.
- Hold the magnet over the LEDs until only the Red LED is lit up solid.
- Pull away the magnet and press the button on the remote desired for that machine's receiver. (Press the High House Button on the Stormy 9000 Transmitter to set the High House Receiver)
- Both the Red & Blue LED on the receiver should flash rapid together.
- If the pairing was successful the Blue LED will be solid again.
- Now repeat that process for the Low House Receiver. Press the Low House Button on the Stormy 9000 Transmitter to set the Low House Receiver
- Test to be sure the pairing was successful
